The custom algorithms allow for precise AI ball control and a new physics engine that results in FIFA 22's most realistic ball physics yet. The EA SPORTS Football Club players and coaching staff are also heavily involved in the development process, as are other specialist skills teams and scientists from the R&D teams at EA Canada, Creative Assembly and EA UK. Today, the game's new features and gameplay changes are being revealed in a series of reveals starting in FIFA 11 and continuing on FIFA.com, and Xbox.com. We're ready to share more about these changes with you. Below you'll find 10 new features that you can expect to see in FIFA 22. FIFA 22 introduces a completely redesigned way to navigate the pitch. The game introduces a new "X" button for tactical moves such as passing sequences, while the "Y" button allows players to start attacking plays. On the game pitch, players will discover new ways to switch in between defenses thanks to a new ability called "Q" breaks. Using the "Q" key, players can more easily juggle opponents on the field, and apply more accurate dribbling and set-pieces. In addition, attacking players can now easily fake out opponents by leaving possession before sprinting. A special speed meter on the screen informs players of the likelihood of a successful pass. Opponents will now aim to foul you with more insight into your space, as well as more strenuous fouls. Playmaking midfielders will now be more effective with dribbling, shielding, passing and shooting. Take on the challenges of playing the elite level with all-new FIFA

Ultimate Team Challenges. FIFA 22 introduces "HyperMotion Technology" which uses a new physics engine to create incredibly realistic ball physics. The algorithm allows the ball to behave differently depending on the surface being played on, and how the pitch is being used. The physics engine allows the ball to behave differently depending on the surface being played on, and how the pitch is being used. The cover ball is now more responsive to spin and slide, meaning those long, slick dribbles at goal will feel more natural. The player-controlled ball is also more responsive, making the goalkeeper miss saves much more realistically. The new shots are also much more accurate, so you'll see penalties fly in much more realistically.

Features Key:

- HyperMotion powered ball physics deliver greater ball control and a more responsive feel to the game.
- Realistic 3D goalkeepers and takers, authentic soccer ball control, and full-body animations.
- Highly customizable player skill sets for players to focus on what they do best, and improved controls for pro players give them the resources they need to take on the opposition.
- Finely tuned new controls replicate the real-life feel of your favorite games.
- FIFA Ultimate Team brings the depth and mechanics of a virtual team management game to the world's most popular sport.

What's new:

-
- **HyperMotion Technology - Precision is now in your hands. FIFA 2K is using data it gathered from an elite athlete during a full-intensity Fifa match to animate the way players move. It gathers motion capture data from an athlete that suits your playing style. The more you play, the more the game data will be adjusted to stay true to you. Take control over every small movement, stance, and pass - your opponent will have no idea you are even in the game!**
 - **Player-to-player chemistry. When it comes to team chemistry and rapport, the award for player influence goes to none other than Dwayne “The Rock” Johnson. This award-winning actor makes his debut as your team’s cult leader. The Rock seems to command instant respect, everyone’s attention, and his dressing room full of fun and like-minded players.**
 - **Collect all the coins and unlockables. With the return of coins as a currency, this is a great time to put the FIFA song back into your music collection. Earning coins for gameplay in all game modes leads to bonus rewards like cool player sponsorships, game items, and new**

styles of superstitions. There is even a special way to earn coins in Ultimate Team.

- **Core gameplay adjustments. Anisotropic filtering for dynamic light and shadows, physics-based engine, and Dynamic Virtual Stadium create a consistently higher level of visual fidelity without compromising frame rates.**
